

## LAB 3

### Working With the Bootstrap Carousel

#### DESCRIPTION

Build upon the Carousel that you created in class to include more content and functionality.

#### INSTRUCTIONS

While keeping the Bootstrap documentation page open for the Carousel component as a reference, attempt the below challenges.

- ☐ Add *two more* slides to the carousel with different captions and images – use the provided JPG image files in the `img/` directory.
- ☐ Using `custom.css`, reposition the `.carousel-caption` so that it appears back down at the bottom of each slide.
- ☐ Reposition the `.carousel-indicators` so that they appear at the top of each slide.
- ☐ Change the Carousel such that the *last slide* is the one that is the *first one* to appear when the page is first loaded.
- ☐ Modify `custom.js` so that the Carousel *cannot* be controlled using the left and right arrow keys on the keyboard.

When you are finished, either show your results to the Instructor in the class, or submit the entire folder as a compressed archive directly to Lab 3 on Blackboard.

#### EVALUATION

Criteria	Mark
Each of the above challenges are complete	/5
